

H5's custom technology-assisted review — *as a service.*

Whether it's a review for production, an investigation, an HSR Second Request or other regulatory response, finding relevant information in today's massive data collections (either yours or theirs) doesn't have to be your case team's burden. Why not let H5 worry about finding what you need while you practice law?

Working closely with counsel, H5's experts use proprietary technology to identify responsive information quickly, accurately, and at a far lower cost than other alternatives, so you can get the production out the door, on time and within budget.

What you get:

- 
Ease of use. Just tell us what you need to find. We find it.
- 
Accuracy. Get exactly what you need and only what you need.
- 
Flexibility. Change course as needed without costly re-review.
- 
Speed. Fast & scalable regardless of document volume.
- 
Value. Competitive pricing with more for the money.

Documents have become “data,” and what a difference it makes.

Today, a linear review workflow—which treats the document collection as though it were on paper—doesn't make much sense.

Most things now originate electronically, so the collection should be treated like the *data* it is—with tools and technologies that can cluster, stratify, organize, search and interpret meaning in electronic data.

But, deploying and mastering these tools can be expensive, challenging and time-consuming for a legal team. So, why not let the experts take the reins?

Expertise, with advanced technology.

That's where H5 comes in. Over the past decade, H5 has invested heavily in developing proprietary search technology so our experts can create faster, more robust searches.

For us, that means exponentially increased speed, maximum flexibility and ease of use, with no sacrifice in accuracy. For you, it means an accelerated, defensible production, with reduced costs and less risk.

H5 has shown, time and time again, that our NIST-tested accuracy can withstand the most detailed scrutiny — by the opposition or the bench.

Why H5?

> Hybrid TAR process for the best result

H5's team of experts uses both statistical algorithms and expert-designed linguistic models to identify responsive, confidential, potentially privileged and key documents. Counsel is involved at every step, but we do the heavy lifting.

> Superior project management

With years of experience behind us, we can lead your team through the entire process—from the negotiation of production requirements (even with the government) until responsive documents go out the door. We'll get the production where it needs to be, when it needs to be there.

> Dedicated processing throughput

One terabyte per day, global de-duplication and filtering techniques reduce non-responsive volume, often by more than 85%.

> Intelligent data reduction

Our data intake and technology-assisted review processes weed out more non-responsive material, accelerating your quality checks for quick turnaround.

> Relativity®-based hosting

If you need it, we'll provide Relativity for quick and easy access to the data. H5 is a Relativity Premium Hosting Partner.

Case Studies

> H5's High Quality TAR Cut \$2 Million and 18 Weeks for Fortune 500 Company

SITUATION: A Fortune 500 conglomerate engaged H5 to perform a review for production in a pending matter.

After H5 delivered the first set of responsive and privileged documents, the client's attorneys conducted their own pre-production review. Due to the high accuracy of our assessments, the attorneys determined their planned document-by-document review of subsequent deliveries was no longer necessary.

Instead, they reviewed small test samples of each result set, continuing to find the same accuracy. By reducing the number of documents that the client's attorneys had to look at, we effectively eliminated first- and second-pass review, reduced the time to production by 18 weeks, and saved the client over \$2 million.

> High-Speed Review in 8 days for Media Conglomerate

SITUATION: A national law firm representing a media conglomerate engaged H5 to review 400,000 documents before a court-ordered production date. Through various unavoidable client delays, an expected 60-day review cycle was shortened to two weeks.

Despite this unexpected challenge, H5's team of linguists, subject matter experts, and researchers found 80% of the responsive documents in the collection within eight business days—in time for the court-imposed deadline.

> Large HSR Second Request for Health Insurer Completed On Time, Under Budget

SITUATION: Fortune 100 health insurance company needed to collect and review over 4 terabytes of documents and produce to the DOJ to enable on-time completion of its strategic M&A effort.

H5 processed the 4 terabytes of native client data, defensibly reduced the volume by 88%, and used technology-assisted review to assess the remaining documents for responsiveness, potentially privileged, and 10 issue topics. The responsive population was hosted by H5 in Relativity for the client to conduct a streamlined second pass privilege review in time to meet production deadlines.

> Expert Culling Saves Over \$1 Million in Review Costs for Internal Investigation

SITUATION: A national law firm conducting an internal investigation on behalf of its Fortune 500 client was faced with a collection of over a million documents. Because of tight timelines and a lean review team, the firm needed to minimize the amount of information for review.

Through expert culling based on advanced linguistic strategies, H5 reduced the collection by nearly half, saving the client over \$1 million, while minimizing the risk of eliminating relevant documents. From there, our search experts identified a subset of documents for further review and prioritized 500—affording the law firm time to conduct a document-by-document review and find the critical information the client had requested.

“

H5 provided the type of professional service and quick turnaround that a company can only dream about in a situation like this. They helped us find what we needed, faster than we ever could have—and the best part is that we didn't have to pay an arm and a leg to get the job done.
